NEW PRODUCT

## PACIFIC AIR CONTROLS

AIR BRAKE CORPORATION of AUSTRALIA is pleased to announce the introduction of an exciting and comprehensive new range of products under the '**PACIFIC AIR CONTROLS**' name...a high quality air brake alternative at extremely competitive prices.

This product represents a real alternative to the dubious quality of 'no-name' replacement parts, at a price point significantly below most traditional 'original equipment' brand names. Indeed, it is fast becoming the new 'original equipment' brand, with many OE vehicle manufacturers now specifying PACIFIC components on the production line.

Our engineering staff have worked closely with our manufacturing partner to develop the PACIFIC range, and have personally inspected the production facilities to assure ourselves of the highest standard of manufacture. All PACIFIC product is manufactured under audited ISO9002 quality control standards, and is subject to 100% end of line function and leakage testing. In addition to this stringent quality control, we conduct our own comprehensive testing on randomly selected samples before accepting them into stock.

So confident are we of their quality that we are offering the reassurance of the same 12 month / 100,000 klm warranty you get with our original equipment product.

All PACIFIC components are tagged with part number and date of manufacture for easy identification and traceability, and most are individually packaged in distinctive boxes, enhancing the perception of quality and point of sale appeal.

Contact your local AIR BRAKE CORPORATION representative today for details of this exciting new program.
